BUNDABERG HOSPITAL COMMISSION OF INQUIRY

STATEMENT OF DIETER BERENS

DIETER BERENS makes oath and states as follows:

- 1. I was born on 23 March 1957 and I live in the Bundaberg District at an address which I have provided to the Commission.
- I am employed in the Bundaberg Base Hospital as a Staff Specialist within the Anaesthetic Department (which includes working in the Intensive Care Unit), and I am responsible, in that capacity, to Dr Martin Carter.
- 3. I completed my primary medical degree in 1981 at the University of Pretoria, South Africa, and I completed my Diploma in Anaesthetics in South Africa in 1990, together with a Diploma of Emergency Care. I completed four years of anaesthetic training from 1992 to 1996, and I have been qualified as an Anaesthetist in South Africa since that time.
- 4. I arrived in Australia in 1999. I have completed the Overseas Trained Specialist Exam and, effectively, I have been qualified as an Australian specialist since May 2002.
- 5. When I arrived in Australia, I started work in Mount Isa. I worked from July 2000 to July 2001 at the Bundaberg Base Hospital. I then worked in the Ipswich Hospital for 18 months and in the Hervey Bay Hospital for 12 months. In January 2004, I moved back to Bundaberg Base Hospital and commenced my current job. From that time, I was working regularly with Dr Jayant Patel.
- 6. I had some general misgivings about Dr Patel soon after I commenced working with him. I formed the view that, whilst he was quite efficient in certain procedures, his medical knowledge generally was not up to date. Moreover, he would become quite aggressive to staff where a bleed or other

Document 469
7. BANGNS

difficulty arose in the course of surgery. Further, I had the impression that he was not always honest about what he was saying.

- 7. An example of the last point is a patient that was treated in about February 2004. Dr Patel had operated upon the patient and the patient was then admitted post-operatively to ICU. In that operation a section of the bowel was This is called an anastamosis. The patient was stitched together. deteriorating in ICU and appeared to have an infection. I contacted Dr Patel and made him aware of the situation. Dr Patel, after much discussion, decided to obtain a second opinion from another surgeon, Dr Pitre Anderson. Dr Anderson agreed with Dr Patel that the patient needed to return to theatre It was clear to me that there was leakage of the for an operation. anastamosis and that the operation was to repair that leakage. Dr Patel, however, denied that there was any leakage of the anastamosis, saving that he didn't know the source of the infection. He then conducted the operation exactly as you would if you were repairing a leak in the anastomosis.
- 8. After that operation, I confronted Dr Patel about a particular clinical matter. I raised some concerns I had about Dr Patel's decision to give this patient blood. I questioned why he had made that decision and asked what evidence he had that showed it was necessary. Dr Patel said that he did not need to give me any evidence and the only person to whom he would be giving evidence was Dr Keating in the administration.
- 9. Soon afterwards, I was called to Dr Keating's office. He said that he had received a report that I was confronting Dr Patel. Dr Keating told me that I had to get along with Dr Patel because we were professionals. I was not asked to discuss the reasons for the dispute between Dr Patel and I.
- 10. When I have dealt with Dr Patel I have always been a little wary, as a result of my experiences, about taking on trust his comments about the underlying pathology.
- 11. I was aware that, right from the beginning of my time at the Bundaberg Base Hospital, ICU staff have not been happy with Dr Patel. This has been well

Document 469 アルステルテルS B. Aslett gr (C. Dec)

known through the hospital. I became aware at some point in 2004 that Dr Miach would not allow Dr Patel to operate on his patients. He did not tell me directly. I heard it on the "grapevine". I was told by Dr Strahan in early 2005 that Dr Strahan would prefer that Dr Patel did not operate on his patients.

- 12. The most concerning aspect of Dr Patel's practice, to my mind, was his approach to intensive care. Bundaberg Base Hospital has a level 1 intensive care unit. A level 1 ICU has certain restrictions on staffing and equipment and is limited in the type of patients it can support.
- 13. Due to the amount of surgery that Dr Patel performed the ICU staff were required to work overtime. I recall the ICU staff were also concerned about the types of operations that Dr Patel was performing.
- 14. I also recall that Dr Patel was reluctant to transfer his patients to Brisbane when the ICU staff thought otherwise.

Patient P21

- 15. I remember in late 2004, we operated on the patient who has been identified to the Commission as P21. I was the Anaesthetist for the operation, and I was also involved in P21's post operative care. P21 was a man in his late 60's but he was reasonably fit and healthy. Dr Patel diagnosed the man as suffering from cancer in his oesophagus. Dr Patel maintained that he had less than a year to live. Dr Patel proposed to do an gastro-oesophagectomy to remove the cancer. I do not recall whether Dr Patel told me whether the cancer had spread beyond the man's oesophagus. The surgical plan was to do a laparotomy to open the abdominal cavity so that Dr Patel could work on the stomach, and a thoracotomy (a procedure in which a patient's chest is opened) so that he could re-sect the oesophagus.
- 16. As the Anaesthetist, I sit at head of the patient and I do not have a very good view of what is happening at the operation site. During the operation the anaesthetist is responsible for monitoring vital signs, including blood pressure, heart rate etc. Also the anaesthetist has to manage the anaesthetics and make sure the patient stays asleep and stable. It was not possible to watch

Document 469
D. GERENS

B. aslett JP (C. Dec). JUSTICE OF THE PEACE how the surgery is going. After Dr Patel had performed the laparatomy, he then started doing the thoracotomy. The patient was turned on to his side for that purpose. The patient became unstable at times. I thought that the symptoms were consistent with the patient bleeding.

- 17. When Dr Patel had completed the re-section of the oesophagus, he turned the patient onto his back, and at that point, there was lots of blood coming through the various drains that had been inserted. In my experience that development strongly suggests that there is bleeding somewhere in the abdomen. I said to Dr Patel words to the effect that there seemed to be a "bleeder" in the abdomen but Dr Patel said he did not think that he needed to open up the patient again. The staff present made Dr Patel aware that the patient had all the signs of losing blood, but Dr Patel said he did not feel that the patient needed operating on at that point. During the operation the patient needed transfusions to keep his blood volume and blood pressure up.
- 18. The patient was then transferred to ICU where we kept him on a ventilator. He continued to bleed into the drains and he became more unstable.
- 19. Whilst Dr Patel was carrying out the other operation, I made the junior doctor aware who was not assisting the operation at that stage, that P21 was not doing well. I recall Dr Patel's other operations took almost four hours which was unusually long. When he finished the second operation, he returned to operate on P21. P21 was taken back to theatre and Dr Patel tried to locate the bleeding point through the previous laparotomy. He could not find it there and then he opened up the chest. Again he could not locate the bleeding. At that point, I recall he said that there was nothing more we could do. The operation was completed and the patient was taken back to intensive care. P21 just continued to bleed and, as could be expected, and he died about 12 hours later.
- 20. I should say that, in my opinion, if the gastro-oesophagectomy had gone without a hitch, in ordinary circumstances, the ICU would have been able to handle the post operative care. The problem with doing gastro-

B. Aslett JP (C.Dec). Justice of THE PEACE

Document 469

oesophagectomies at Bundaberg Base was that we simply did not have the resources to cope with any post-operative complications.

- Annexed to my statement and marked with the letters "DB1" is a bundle of documents being extracts from P21's medical reports.
- 22. After the operation for P21, I went to see Dr Carter and conveyed to him my, and the theatre staffs', concerns. He, in turn, said that we should go and see Dr Keating. There were basically two issues I wanted to raise. The first was that the nursing staff involved in the operation were not happy with Dr Patel's behavior. The second was that Dr Carter and I thought that the death should be referred to the Coroner. Dr Carter indicated that he generally shared my views.
- 23. When a death certificate is signed, the protocol is that the doctor who is taking care of the patient usually signs it. That doctor then determines, in my experience, whether a death should be referred to the Coroner. There need not be a coronial inquest if the person dies of natural causes.
- 24. Dr Carter and I met with Dr Keating shortly after P21's death. Dr Keating's response was that, if we thought it was a Coroner's case, we should alert the Coroner. At that stage, however, my recollection is that the body had already been buried. Dr Keating did not show any interest in investigating the reason for our concerns.
- 25. Apart from one incident, I have no recollection of any dealings with the District Manager, Peter Leck. In the course of 2004 I was called to the Executive offices and I met with Dr Keating and Mr Leck there. I understood at that time that there was an inquiry underway which had been instigated by ICU staff. It concerned Dr Patel. I was asked to give them my opinions on Dr Patel's performance. I said that Dr Patel did certain operations efficiently but that his general knowledge in relation to medicine seemed outdated. I also explained that when complications arose, such as the patient bleeding, he started to become more aggressive with staff and sometimes lost his temper.

B. Aslett JP (Cale) JUSTICE OF THE PERCE

Document 469
D. Birris

Patient P26

26. I should say that I also had dealings with the patient P26. I co-administered the initial anaesthetic. Dr Zia was the Anaesthetist on that occasion. I cannot comment on whether the way the surgery was done was appropriate. I would say that P26 was in a good deal of pain post operatively, and he needed a lot of extra medication to control that pain.

All the facts and circumstances above deposed to are within my own knowledge and belief, save such as are deposed to from information only and my means of knowledge and sources of information appear on the face of this my Statement.

Affidavit sworn on 23/6/2005 at BUNDABERG
